2-Year Standard Warranty can be extended for an additional 3 years for around \$79 per pager.

Pager Programming is easily accessed via a small software download from

www.unicationusa.com. The programmer base receives its power from the USB cable. Any future updates will be available through your dealer.

PL Tone Customization eliminates the nuisance of unwanted radio traffic by putting your TPL or DPL within the G1 pager, also eliminating the need to remain in "selective call" mode.

Backlighting allows the pager's screen to remain (as a nightlight) or off while charging. Tones can be assigned up to seven different backlight colors to identify the type of call.

nication's G1 The First Submersible Voice Pager

General Fund Savings can be expected as the unexpected cost of repairs or replacement of pagers due to water, dust, or fall damage is mitigated.

Pager Identification helps quickly get misplaced pagers back to their owners. The G1 screen can be programmed with the Department's name, username or employee ID. Any pagers left in the cab area of apparatus or around the stations can be instantly identified and returned.

Mutual Aid calls are made easier thanks to the G1 scanning and playback features. Fire Departments covering their neighboring departments can program in and scan each other's frequencies (same band) and tones. The Mutual Aid calls tone out and will activate the G1's recording features and the user can play back the call, as needed, to validate unfamiliar addresses instead of asking over the air.

Voice Recording on the G1 pager can be helpful for documenting combative patients. Police Officers can review witness statements later. Recordings can be used for reminders of future tasks or meetings, or the feature can be disabled altogether.

Replay Delay can be used to require a two second "press and hold" on the replay button to avoid hearing a message if you accidentally bump the button. The pagers can be programmed either for button push or two second hold.

Tone/replay automatically mutes squelch when the pager stops toning and goes into record mode, if the dispatcher does not speak right away, the pager will NOT record the "squelch". When the user presses the replay button, the user will see a "play bar", time, date, and the tone ID. No audio will be heard until the dispatcher speaks.

Custom Tones can be created for up to 8 groups with up to 16 sets of tones per group.

Tone Out Alert Customization allows the user to identify the type of call by the alert type, backlighting, or on-screen display.

FEATURE RICH. BUILT TO LAST.

Waterproof and submersible up to a depth of 3 feet for 30 minutes. The G1 can withstand being dropped into a porta tank or drainage ditch.

Dustproof against drywall, ash, dust and other fire ground particles. The G1 pager can be worn on the outside of turnout gear to monitor calls and operations and simply washed off under a faucet once the work is done.

Durable Rubber Housing minimizes the chances of the pager getting cracked or otherwise damaged when personnel put on their bunker pants, or get into and out of their personal vehicle or apparatus.

The Charging Stand snugly seats the G1 pager. In addition, the charger has a USB connection to charge phones or other devices.

User friendly Front Screen allows personnel to customize options within the G1 pager on the job.

Customizable Sensitivity can be configured to further increase alert ranges. This reduces issues with dead spots and indoor coverage assuring personnel are alerted to a call.

Eliminates Confusion for personnel regarding channel selections. The backlight, front screen will display the current channel allowing personnel to quickly validate their selection and ensure they are on the correct channel.

Multitude of Scanning Options adds flexibility for stations and personnel. The G1 can be set up to scan any local area fire departments on the same frequency band. You can also set your fire department as a priority while in scan mode. If your department tones out, scan will stop and your pager will alert and record. In addition, personnel who work and vacation away from their home area are able to set up another scan zone, allowing them to monitor the area they are in.

Rechargeable AAA Batteries power the G1 and are purchased from any local store. This eliminates having to purchase proprietary batteries at a higher cost.

Over the years, fire pagers have struggled to keep up with firefighters.

The G1 pager solves these issues with unparalleled customization for personnel and rugged durability for the job.
